

DEKOTEC GMBH

Buried steel pipes for the transport of liquid and gaseous media are protected against corrosion by coating with thermoplastic material or thermosetting compounds. While coating of the pipe is done in the factory, some parts and installations of a pipeline remain that have to be coated on the construction site. Depending on pipe laying method, trenchless or in open trench, only welded joints or also bends, T-pieces, flanges and valves have to be protected in the field.

Based on materials like polyurethane, polyethylene, butyl rubber, petrolatum and combinations thereof, DEKOTEC is able to offer a broad variety of proven corrosion prevention systems as well as tailor made solutions for special fields of application.

Major Products

- BUTYLEN tapes and systems
- DEKOMAT wrapping machines for BUTYLEN-Tapes
- LIQUITOL polyurethane coatings
- Plastelen tapes and mastics
- DEKOTEC Heat Shrink Sleeves
- Bitumen tapes
- DEKOTEC Rockshield DRM-PP

Technology
for Pipelines
